EDUCATION

The University of Texas at Austin, Austin, TX

May 2028

Bachelor of Science in Computer Science

Relevant Coursework: Data Structures, Discrete Mathematics, Computer Architecture

SKILLS

Programming Languages: Java, Python, JavaScript, C, C#

Technical: Git, Unity, Figma

Languages: Russian (Fluent)

EXPERIENCE

JAPANLAB/EPOCH HISTORY GAMES INITIATIVE INTERNSHIP, Austin, TX

Oct 2025 - May 2026

Gameplay Programmer and UI/UX Designer

- Led development of core gameplay systems and reusable UI architecture in Unity using C# for a semester-long educational software project.
- Designed modular UI components and integrated front-end systems with gameplay logic through iterative testing and cross-functional collaboration.
- Collaborated with engineers, designers, and researchers using Git to develop and refine software features.

SEO TECH DEVELOPER FIRST YEAR ACADEMY, Remote

Feb 2026 - June 2026

Academy Participant

- Developed foundational software engineering and programming skills in Python, collaborating with other developers to build a fully functional Python game in PyGame as a final project.
- Proactively engaged in specialized mentorship geared toward preparing for internships in the tech industry.

LEADERSHIP & COMMUNITY INVOLVEMENT

UNIVERSITY OF TEXAS AT AUSTIN, GIRLS WHO CODE, Austin, TX

Jan 2025 - Present

Publicity Director

- Designed and distributed high-impact promotional materials, including digital assets and physical flyers, to communicate club initiatives and technical workshop opportunities to a diverse student body.
- Collaborated with the executive board to coordinate publicity timelines for major events, maximizing outreach.

PROJECTS

QUEST FOR QUININE | C#, Unity

Oct 2025 - May 2026

- Designed and implemented scalable UI components, translating complex data into intuitive user interfaces with a focus on performance and accessibility.
- Developed core gameplay systems through iterative prototyping, implementing custom animations and responsive player interactions.

BIT BLAST | C#, Unity | <https://block-blast-but-i-need-to.study/>

Apr 2026

- Engineered a high-performance UI-based engine using Unity's Canvas system to handle all physics-free movement, scoring, and dynamic difficulty scaling.
- Developed a logic-gate puzzle game in a 24-hour sprint, gamifying Boolean operations (XOR, AND, NAND) to reinforce computer architecture concepts through spaced repetition.

PRESENTATIONS

ANTIQUITIES ACTION SYMPOSIUM, The University of Texas at Austin

Mar 2026

Guest Speaker: "Digital Humanities and Heritage Futures"

- Presented the design and implementation of *Quest for Quinine* to university faculty and researchers, demonstrating gameplay systems, UI architecture, and collaborative software development.
